

Satellite radio has been very reliable for me in my business travels. I want MORE areas covered by traffic advisories. With Satellite Radio my channel guide gives me the channels for the areas I will be traveling in. Regular radio does not have the quality of sound nor are you able to find some of the local stations. In many cases regular radio is overshadowed by stations from other areas (some from very far away - signal bounce) and listening is degraded. MY VOTE is for expanded XM radio Coverage.
